

26' GROWING DOME DOORWAY GLAZING MODIFICATIONS Using Twin Wall Polycarbonate

DOORWAY MODIFICATIONS

Due to the lack of availability of large glazing pieces, when building an 18' dome with twin wall glazing, some modifications need to be to the doorway glazing. Instead of 4 pieces (Upper and Lower Pentagons), there will be 5 pieces as shown below. The doorway glazing is cut to the sizes shown which is larger than required. It is trimmed on site for an exact fit.

NOTE: The bottom edge of the lower door pentagon panels that attach to the top of the foundation wall (see paper dome model) get bottom caps that require longer screws. Using the 2" bottom cap screws provided, screw through the bottom caps, glazing panels, horizontal metal trim, and into the wood struts, following the same screw pattern. These are not installed, however, until Step 12.
